

An aerial night photograph of a city's industrial and port area. In the background, a city skyline with illuminated skyscrapers is visible across a body of water. A large bridge spans the water. In the foreground and middle ground, there are numerous industrial facilities, including large storage tanks, cranes, and a large building with a flat roof. A network of roads and highways is shown with long-exposure light trails from vehicles, appearing as streaks of white and blue light. The overall scene is a mix of urban infrastructure and industrial activity.

Urban inference can belong near demand

Cheap land pulls facilities outward. Interactive AI pulls compute toward users. Existing urban infrastructure may make that trade worthwhile.

Density raises costs and creates synergies
